The Carenado TBM 850 HD Series v3.3 is a highly detailed and realistic simulation of the TBMs most popular business class turboprop, and true to its "HD Series" appellation, it comes with a level of detail never before seen in such a product. On October 4, 2014 Carenado released v3.1 of the Cessna TBM 850 HD Series. This version came with a new exterior model which included a new texture and Virtual Cockpit that were developed from scratch using native PBR materials. The interior textures were also reconstructed as it is now possible to use up to 4096x4096 pixels or larger bitmaps making the aircraft textures look much more detailed than before. The interior lighting was also greatly enhanced featuring better management of sunlight inside the aircraft cabin, realistic reflections on glass surfaces and more realistic autolighting inside the cockpit. The Carenado TBM 850 HD Series v3.3 is a highly detailed and realistic simulation of the TBMs most popular business class turboprop, and true to its "HD Series" appellation, it comes with a level of detail never before seen in such a product. The Carenado TBM 850 HD Series v3.3 is a highly detailed and realistic simulation of the TBMs most popular business class turboprop, and true to its "HD Series" appellation, it comes with a level of detail never before seen in such a product. In an interview on FlightSimWatch. com Matthias Dold, Carenado's producer, revealed that Carenado is in the process of developing their next major project which will be powered by the brand new XPlane 11. As for other projects in the works, he ruled out any possibility of X-Plane 10-compatible versions of their existing Boeing and Airbus aircraft series. Dold also talked about how Carenado went about designing and modeling their PBR-based textures to create photorealistic 3D models. On October 2, 2016 FlightSimLabs announced that they would not extend their license with Carenado to include XPlane 11. According to the announcement, "FlightSimLabs has been working diligently to add X-Plane 11 compatibility to our Carenado series of aircraft. In order for this to happen, we have been required by Carenado to remove all features from the existing aircraft that can not be updated for X-Plane 11. This includes a modular cargo door and custom exterior paint jobs." The result of this forced update is a complete loss of native XPlane 10 compatibility with the TBM 850 HD Series v3.3 model. However, the released v3.1 version still supports X-Plane 10 and can be used with VR support.
